INSTRUCTIONS how to replace a CONNECTOR :

1. Remove the connector, which should be replaced, from the base plate
2. Remove copper O-ring from its seat in the hole
3. Insert a new copper O-ring in the seat in the hole
4. Assemble the new connector into the base plate with a torque of 30 Nm
5. Perform a leak test on the new connector and the base plate with a leak detector, Snoop etc.

Remark :

Since SGT is using a plan parallel thread for Connectors and Base Plates, it is POSSIBLE to replace connectors ; some other manufacturers are using PNT thread, where it is IMPOSSIBLE to replace the connector !!

Rear end connectors :

- Brass or SS
- 1/4" or 1/8"
